Natural snow last 24-48 hrs.: 0"

Today's trivia – What long toothed mammal inhabits cold regions and frequently eats clams?

Walruses primarily feed on invertebrates, especially mollusks like clams. They use their sensitive whiskers (vibrissae) to detect prey on the ocean floor. Walruses can also eat other organisms like shrimp, crabs, tube worms, soft corals, tunicates, and sea cucumbers. Occasionally, they might prey on fish.
